

CRT THIRD DAY

Q1. WAP that takes an integer as input from user, print all the numbers between 1 to N that is divisible by 2

```
SOL: #include<iostream>
```

```
using namespace std;
```

```
int main()
```

```
{
```

```
int n;
```

```
cout<<"Enter integer"<<endl;
```

```
cin>>n;
```

```
for(int i = 1; i<=n; i++)
```

```
{
```

```
if(i % 2==0)
```

```
{
```

```
cout<<i<<endl;
```

```
}
```

```
else{
```

```
cout<<" "<<endl;
```

```
}
```

```
}
```

```
return 0;
```

```
}
```

Q2. Use while loop for voting ques.

```
SOL: #include<iostream>
```

```
using namespace std;
```

```
int main()
```

```
{
```

```
int age;
```

```
cout<<"Enter age:"<<endl;
```

```
cin>>age;
```

```
while(age< 18)
```

```
{
```

```
    cout<<"Not eligible to vote. Enter again: "<<endl;
```

```
    cin>>age;
```

```
}
```

```
cout<<"Eligible to vote"<<endl;
```

```
return 0;
```

```
}
```

q3. wap that takes a positive integer n as a input from user then calculates its factorial using for loop.

```
Sol; #include<iostream>
```

```
using namespace std;
```

```
int main()
```

```
{
```

```
int n;
```

```
int factorial =1;
```

```
cout<<"Enter positive integer: "<<endl;
```

```

cin>>n;
if( n<0)
{
    cout<<"invalid number"<<endl;
}
else {
    for(int i =1;i<=n; i++)
    {
        factorial = factorial*i;
    }
    cout<<"Factorial= "<<factorial<<endl;
}
return 0;
}

```

q4. WAP, find the fibonacci series between 1 to n.

Sol: #include<iostream>

using namespace std;

```

int main()
{
    int n;
    cout<<"Enter number: "<<endl;
    cin>>n;

    int a=0, b =1;
    cout<<"Fibonacci series: "<<endl;

    for (int i =1; i<=n; i++)

```

```

{
    cout<<a<<" "<<endl;
    int next = a+b;
    a = b;
    b = next;
}
return 0;
}

```

Q5. create a multiplication table using for loop.

Sol: #include<iostream>

using namespace std;

```

int main()
{
    int n;
    cout<<"Enter number: "<<endl;
    cin>>n;

    for ( int i =1; i<=n; i++)
    {
        cout<<n<<"x"<<i<<"="<<n*i<<endl;
    }

    return 0;
}

```

q6. wap that takes whether a given no. is prime or not.(prime numbers start with 2,3..)

Sol: #include<iostream>

```
using namespace std;
```

```
int main()
```

```
{
```

```
    int n;
```

```
    cout<<"Enter number: "<<endl;
```

```
    cin>>n;
```

```
    if (n<=1)
```

```
    {
```

```
        cout<<"not a prime no."<<endl;
```

```
        return 0;
```

```
    }
```

```
    for(int i = 2; i<=n; i++)
```

```
    {
```

```
        if (n%i != 0)
```

```
        {
```

```
            cout<<"not prime"<<endl;
```

```
            return 0;
```

```
        }
```

```
    }
```

```
    cout<<"it is a prime"<<endl;
```

```
    return 0;
```

```
}
```
